

Australia's No. 1 in Digital Printing Decal Products !

## Iron On T-Shirt Transfer

### Description

Make your own photo t-shirt, using Iron-On T-Shirt Transfer Paper. You can print any image or photo using a normal inkjet printer and easily apply it onto any bright coloured textile.

Paper Thickness: 170gsm

Size: A4 (5 sheets)

Colour: **Clear** for bright coloured items

### How To Use

1. Make a transfer design in the desired size and shape using your computer. Enhanced the quality of the image and adjust to the proper level (300dpi or higher).
2. Reverse the image.
3. Set the paper type to 'Photo Paper' or similar option from the printer setup panel.
4. Print the image using an inkjet printer.
5. Cut out the image using scissors or knife. Keep around 5mm margin off the image.
6. Place the t-shirt on an ironing board and place the printed face down onto the t-shirt.
7. Set the iron to the highest temperature.
8. Iron for 15 to 20 seconds to fuse the fabric together.
9. Wait until the fabric has completely cooled down before removing the backing paper.

It is recommended to turn the inside out when you wash or iron the t-shirt then it will last longer.
