

Iron On T-Shirt Transfer

Description

Make your own photo t-shirt, using Iron-On T-Shirt Transfer Paper. You can print any image or photo using a normal inkjet printer and easily apply it onto any **DARK** coloured textile.

Paper Thickness: 170gsm

Size: A4 (5 sheets)

Colour: **White** for dark coloured items

How To Use

1. Make a transfer design in the desired size and shape using your computer. Enhanced the quality of the image and adjust to the proper level (300dpi or higher).
2. Print the image using an inkjet printer and set the paper type to 'Photo Paper' or a similar option from the printer setup panel.
3. Cut out the image using scissors or a knife.
4. Peel the printed film off the teflon paper (the one with check pattern on the back).
5. Place the t-shirt on an ironing board and place the film printed side up onto the t-shirt.
6. Put the teflon sheet on the film. Make sure the teflon side (glossy side) is face down.
7. Set the iron to the highest temperature.
8. Iron for 60 to 120 seconds to fuse the fabric together.
9. Iron again if there is any spot not fused. The teflon sheet is reusable.

It is recommended to turn the inside out when you wash or iron the t-shirt then it will last longer.
